

QPX750

Revision	Date	Changes
v1.00	17/03/2021	First release.
V1.01	12/04/2021	Updated Display Main and CTRL Main by disabling Process protection function when the unit is in calibration menu. Added necessary inter processor commands for that. Updated LSR? Command which now resets the active status in LSR register after it has been read by remote command.
V1.02	08/12/2021	Updated Display Main FW as there was wrong register getting set in GPIB_IbSet function which was causing problem when other units were connected on same GPIB bus. Cleared Op LED when Reset command was sent.
V1.03	15/08/2022	Bug Fixes with GPIB as query commands were not always responding. Bug fixes with manual IPV4 configuration as IP address, Subnet Mask and other parameters were not correctly entered from front panel menu or from remote command.
